MEDIA ADVISORY

SYNTHETIC NATURAL GAS SYSTEM - WINTER PREPARATION

Inuvik, NT -- In preparation for cold temperatures this winter, crews from Inuvik Gas will complete the installation of heat trace and insulation on meters and above-ground gas risers at customers' homes and businesses by early next week.

This work, similar to wrapping the meter and exposed pipe in an electric blanket, has been done to support safe and reliable service during extreme cold weather. Once the heat trace and insulation work has been completed, covers for the meters will be installed over the following few weeks.

To ensure continued safe and reliable gas service, it is essential that the supply of electricity to the heat trace remains on. Please do not unplug the Ground Fault Interrupt (GFI) device.

We want to sincerely thank our customers for welcoming us into their homes and businesses during this process. This project could not have been completed so quickly without their cooperation and understanding.

More information is available at www.inuvikgas.com or by calling Inuvik Gas' general number at 777-3422.

Merry Christmas and Happy New Year.
